

# GSE-TK-CO Brasch GSE Carbon Monoxide Detector / Transmitter Test Kit

The Brasch GSE-TK-CO test kit contains all supplies necessary for testing the performance of Brasch GSE series carbon monoxide detectors and transmitters in a controlled environment. A regulated, selectable sample concentration of carbon monoxide gas is exposed to the sensor over a test interval producing effects that may be compared to predicted results.

The kit is housed in a secure, heavy gauge plastic case and contains sufficient materials to conduct approximately 100 tests along with complete, easy to follow instructions for its use.

The test kit is the most convenient and accurate method of assuring the proper operation of your CO monitoring system and to provide compliance with mandated testing or periodic maintenance procedures.
